

RANGE OF PRODUCTS

PUCEST[®] protect GmbH

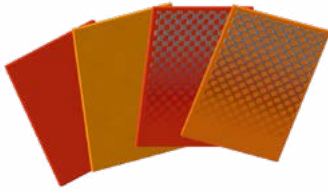

FEATURES

PUCEST Protective Wear Plates can be used as lining, splashback, deadplate, wiper, lateral guidance and for similar applications.

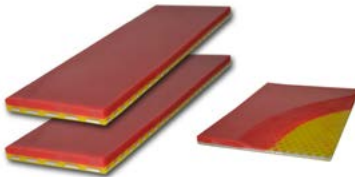

PUCEST[®]
Experts for wear protection

RANGE OF PRODUCTS

PUCEST screw-mountable plates with inlay (steel / aluminium / Hexagon / expanded metal)

Extremely resistant, yet easily to be mounted.

PUCEST Signal-Plate

Informs optically about the degree of wear, to replace the worn areas before the occurrence of any damages beyond repair.

PUCEST Anti adhesion Plate (with PTFE)

Due to its particular characteristics it can be cleaned easily, because there is almost no contamination or deposit build-up.

PUCEST Hybrid-Plate

Specifically designed for the lining of vibrating conveyors that are exposed to very high stresses.

PUCEST Precision-Plate (without inlay)

Due to the special production method, extremely accurate thicknesses with a dimensional accuracy of +/- 0,5 mm can be achieved; available up to 550 x 2.750 mm.

PUCEST-Plates can be easily cut to size with a jigsaw. Thereupon they can be used as lining in feeding trays or weighing containers for instance. The wear protection layer is screwed or glued to the base body.

PUCEST Protective Wear Plates are characterized by excellent abrasion values, high service life and durability.

PUCEST Protective Wear Plates are easily and quickly to assemble and prevent long downtimes.

PUCEST Protective solutions are fixable with the PUCEST PU TIX range, which makes the PUCEST protective solutions unique.

PUCEST Multifunction Plate thicker than 5 mm

Suitable for many standards of the PUCEST protective solutions.

PUCEST Anti-rebound Plate (ARP)

An especially developed material composition prevents the rebound of the bulk material. The ARP protective wear plate effects the smooth transportation of the material and prevents the noisy backlash and crushing of the bulk material. This results in a noise reduction of up to 60% during production!

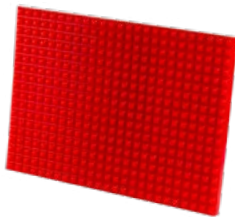

PUCEST Self-adhesive Plate

Protection that can be easily and quickly installed in a chute as, for example, in the bulk goods industry or in blasting booths.

PUCEST-Plate with fabric back

Perfectly suitable for upmarket pipe linings.

Diamond-shaped Plate (different surfaces available)

The surface has special designed diamond-shaped structures that prevent the tendency to adhesion and the static charge of oily bulk material.

PUCEST plate formats and thicknesses

We produce our plates in all common formats and thicknesses. We also produce any individual designs depending on the use and purpose.

Even sizes of 1.400 x 10.0000 mm do not pose a problem.

EASY ASSEMBLY

BY SCREWING

INTERESTING FACTS

PUCEST-Plates can be easily cut to size with a jigsaw.

Thereupon they can be used as lining in feeding trays or weighing containers for instance.

The wear protection layer is screwed or glued to the base body.

PUCEST PU TIX repair and levelling compound

REPLACEMENT IS A THING OF THE PAST!

Quick repair of damaged linings

Applicable for all PUCEST Protective Wear Plates

User-friendly 2 component repair system

Exceptionally long service life

Available as working pack and starter kit

Mix it!
Level out! Ready!
